# CSCI 3104 Algorithms

Fall 2015  
Lecture 17 (Oct 5)

# Announcements

---

## ◆ Homework 1 & 2 & 3, midterm exam 1

- ◆ pick up graded work
- ◆ check grades at moodle

## ◆ Homework 4

- ◆ posted at moodle
- ◆ due at 11am, Wed Oct 7

# Midterm Exam I

---

- ◆ Q1: 4 x 5 points
- ◆ Q2: 4 x 10 points
- ◆ Q3: 4 x 10 points
- ◆ Median = 82
- ◆ Mean = 81.7
- ◆ Stdev = 10.7
- ◆ Max = 100

# Problem 1

---

- ◆ In each of the following situations, indicate whether  $f = O(g)$  or  $f = \Omega(g)$ , or both (in which case  $f = \Theta(g)$ ). Briefly explain why.
  - ◆ definitions of  $O()$ ,  $\Omega()$ ,  $\Theta()$
  - ◆ exponential, polynomial, logarithm
  - ◆ lower order terms, leading coefficient

# Problem 1 (cnt'd)

---

- ◆ In each of the following situations, indicate whether  $f = O(g)$  or  $f = \Omega(g)$ , or both (in which case  $f = \Theta(g)$ ). Briefly explain why.
  - ◆ (a)  $f(n) = 6n^6 + 9n^3 - 300n$ ,  $g(n) = 3n^6 + 6n^2 + 900n$
  - ◆ (b)  $f(n) = 7\log(n^7) + 6n^{10}$ ,
    - ◆  $g(n) = 5^{n/3} + 7n \log(10n + 5)$
  - ◆ (c)  $f(n) = 3n^3 + (n+2)!$ ,  $g(n) = (n+5)^3 + 100n^5$
  - ◆ (d)  $f(n) = 7(n+2) \log n + (7/2)^n$ ,  $g(n) = n^{10}$

# Problem 2

---

- ◆ Provide a brief answer for each of the following questions.
- ◆ (a) Show the key steps of finding the greatest common divisor of 105 and 595 using Euclid's algorithm.
  - ◆  $\gcd(595, 105) = \gcd(105, 70)$
  - ◆  $= \gcd(70, 35) = \gcd(35, 0) = 35$

# Problem 2 (cnt'd)

---

- ◆ Provide a brief answer for each of the following questions.
- ◆ (b) In cryptography, what is the key difference between private-key schemes (e.g., one-time pad) and public-key schemes (e.g., RSA)?
  - ◆ private-key schemes: need prearrangement of private key by both parties (Alice, Bob)
  - ◆ public-key schemes: no prearrangement needed, only recipient (Bob) has private key

# Problem 2 (cnt'd)

---

- ◆ Provide a brief answer for each of the following questions.
- ◆ (c) If an algorithm solves a problem of size  $n$  by dividing it into 8 subproblems of size  $n/2$ , recursively solving each subproblem, and then combining the solutions in  $O(n^2)$  time, what is the time complexity of this algorithm?
  - ◆  $T(n) = 8T(n/2) + O(n^2)$
  - ◆  $a = 8, b = 2, d = 2 \implies O(n^3)$

# Problem 2 (cnt'd)

---

- ◆ Provide a brief answer for each of the following questions.
- ◆ (d) Given a graph  $G = (V, E)$ , what are the time complexities of constructing its reverse graph using adjacency matrix and adjacency list, respectively?
  - ◆ adjacency matrix:  $O(|V| \times |V|)$
  - ◆ adjacency list:  $O(|V| + |E|)$

# Graph Representation Examples

(a)

(b)

	1	2	3	4	5
1	0	1	0	0	1
2	1	0	1	1	1
3	0	1	0	1	0
4	0	1	1	0	1
5	1	1	0	1	0

(c)

(a)

(b)

	1	2	3	4	5	6
1	0	1	0	1	0	0
2	0	0	0	0	1	0
3	0	0	0	0	1	1
4	0	1	0	0	0	0
5	0	0	0	1	0	0
6	0	0	0	0	0	1

(c)

# Problem 3: Graph Algorithms

---

- ◆ Given the following directed graph,
- ◆ (a) What is the size of the adjacency matrix?  
Draw the adjacency list for vertex e.

- ◆  $|V| = 9$

- ◆ adjacency matrix:  $9 \times 9$

- ◆  $e: f \Rightarrow h$

# Problem 3: Graph Algorithms

---

♦ (b) Draw the DFS forest, breaking ties alphabetically.

♦ draw the forest

♦  $a \Rightarrow c, a \Rightarrow e$

♦  $e \Rightarrow f, e \Rightarrow h$

♦  $b \Rightarrow g$

♦  $g \Rightarrow k$

♦  $k \Rightarrow d$

# Problem 3: Graph Algorithms

- ◆ (c) Draw the BFS tree with starting vertex g, breaking ties alphabetically.

- ◆ draw the tree

- ◆ g

- ◆  $g \Rightarrow e, g \Rightarrow k$

- ◆  $e \Rightarrow f, e \Rightarrow h, k \Rightarrow d$

- ◆  $f \Rightarrow c$

# Problem 3: Graph Algorithms

---

◆ (d) Show the result of topological sort (linearization) of the graph.

◆ linear ordering

◆ {b, g, k, d, e, f, c}

◆ a before e

◆ h after e
